### **AI-Powered SME Lending Engine**

Live data. Real behavior. Fair decisions.

# DataCore

**See every business.  
Fund every future.**

## The Project

Banks want to lend to small and medium businesses, but the tools available today rely on paperwork that no longer reflects reality by the time it reaches a decision-maker.

DataCore replaces that paperwork with live data — reading each business's actual financial behavior in real time — so banks can lend confidently, fairly, and quickly.

The system combines four AI models working together to understand any business, detect risk instantly, and open lending to markets banks previously couldn't safely reach.

## For the Bank

### **01 Lend Like You Know Them**

Every business judged by its actual behavior, not by a generic label.

### **02 Every SME, a Data Asset**

Live transaction streams from every business — an asset that powers smarter lending, cross-selling, and market intelligence beyond just interest.

### **03 SMEs Grow, Banks Grow With Them**

Healthy SMEs build lasting bank relationships — the ecosystem grows together.

## What's Next

DataCore is ready to move from prototype to pilot.

### **Next phase (Q3 2026):**

Deploy with one Saudi bank as a decision support layer, running alongside existing lending workflows.

### **Following phase (Q4 2026 – Q1 2027):**

Expand to full portfolio-level monitoring, connect the SME marketplace layer, file patent with SAIP.

### **Long-term (2027+):**

SAMA sandbox approval for automated decisioning, publish academic paper on the behavioral archetype classification methodology, open pathway for other Saudi banks to adopt the platform.
